## Section 9. Interpretation

Discuss how the DNA evidence supports the evidence that could be found. If using autosomal DNA information, provide the number of shared centimorgans (cMs)\*\* between testers and address how the data supports the presumed relationship over other possibilities in the range of matching. If the DNA tests are not enrolled in the NSDAR project hosted at FamilyTreeDNA.com, please provide information on where the applicant and the match(es) have tested.

*\*\*If segment data is available, please provide the total of segments 7cM and larger.*
